Introducing
Easley AI

Transform your Business Process Management by integrating AI Software Bots with employee workflows, automating routines, and helping them to be focused on more creative and strategic tasks.

- **AI-powered** tool with **24/7 support** to help you **increase efficiency**

- **75% faster** development of automation

- Understands **80+ languages**

- **Perform complex automation** tasks with ease **reducing errors** and **improving cost savings**
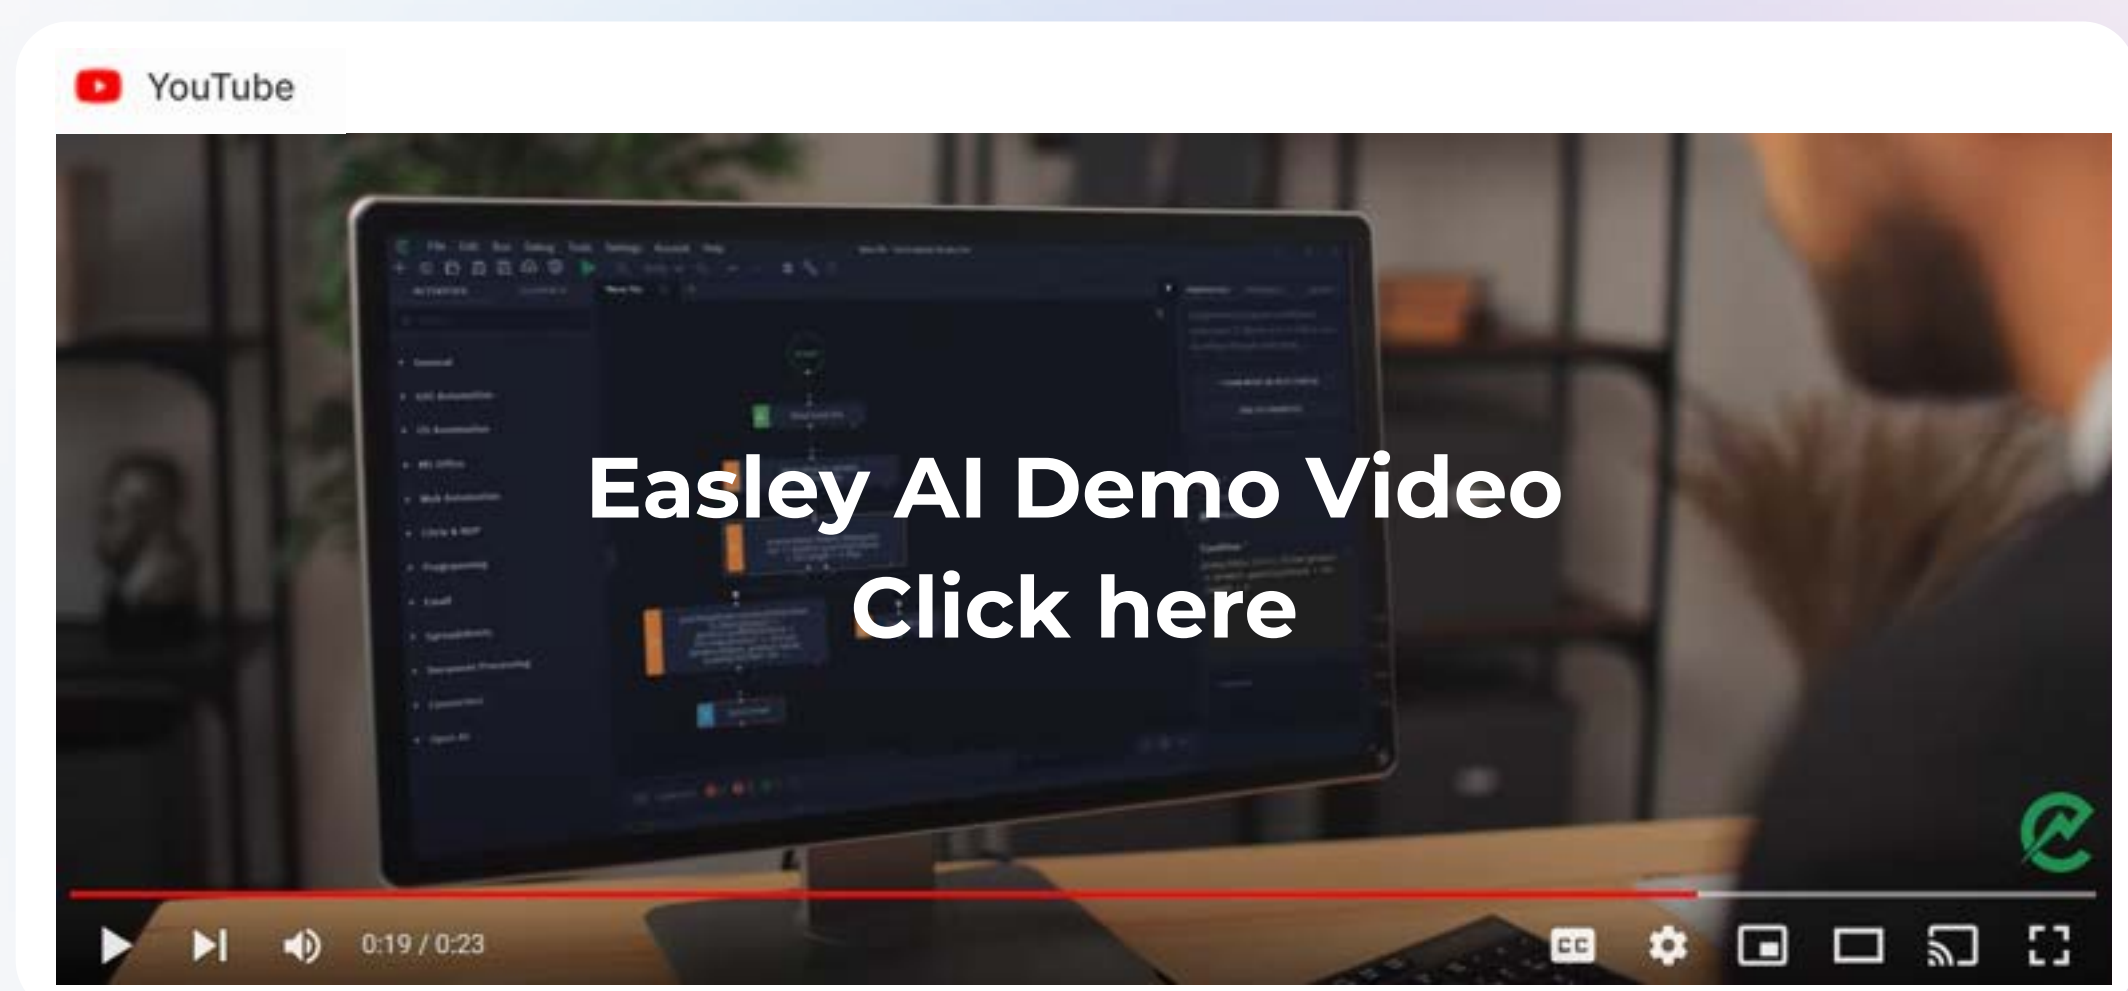

When developing our product, we found deep inspiration in the remarkable story of Annie Easley and her pioneering odyssey in space technology. We are honored and desire to celebrate her monumental achievements by using her name in our creation.

Easley AI - Where words become action

Let the full potential of your business shine with Easley AI, the first of its kind that effortlessly automates operations using natural language instructions.

Easley AI stands out with its automatic comment creation feature, offering clarity at every step of your workflow for you to experience an unprecedented level of automation, since coding is now effortless. Where prompts become processes, where language becomes action!

How Easley AI Works?

- **Generate workflows by describing** them to the prompt command

- Start **building bots by writing text in how you speak naturally**, not programming language.

- AI Assistant for **product documentation** and **educational resources**

- **Supports** actions like **dynamic currency rate calculations** and **weather data usage**

- **Everyone** can now **build sophisticated automation workflows,** not just a **developer.**

10 Easley AI Generated Workflows (Use Cases)

General and System tasks

Reporting Automation

User input
Ask the user to input their name, email and age.

User Notification / Console Log
Ask the user to input their name, then show it on a notification on screen and finally write it to the console.

CMD
Ask the user to input an URL, then check the ping against that URL using CMD, and finally write it to the console.

Email Tasks

Read email
Read all emails from an inbox with the word "Invoice" in the subject.

Send email
Set the path to an invoice PDF file, then send an email informing that payment is overdue for that invoice, with the PDF file as the attachment.

MS Excel Tasks

Read Excel
Read an Excel file and save its content to a variable, then write it to the console.

Write Excel
Read an Excel file, save its contents to a variable, and then write those same contents to a new Excel file.

Advanced Tasks (API & IDP)

IntelliDocs
Set the path to a PDF document, then process it using IntelliDocs, then write the results to the console.

Rest APIs
Use the Open-Notify API to check how many people are in space right now, then show the result on screen in a user notification.
